iPro memory upgrade
128MB memory for 4 DIN iPro and IPG808D

With the aim of improving continuously our products and focusing on our customers' needs, Dixell is pleased to inform you that from the first week of June a memory upgrade will be performed and it will involve all the **4 DIN** format programmable controllers (IPL excluded) and the **IPG808D**.

The physical memory on the mentioned controllers will be upgraded from 32MB to 128MB, granting the possibility of a higher space to store log files and to manage the custom website.

The upgrade will be automatically done for all the mentioned hardware and the full compatibility will be guaranteed with any existing application or functionality.

There will not be codes or prices variations.

1. Availability and orders

The upgrade will be effective starting from the first week of June; please contact our sales department for delivery time and further information.
